To Our Patrons and Friends :

We wish to thank our numerous customers who have shown their confidence in this company by favoring us with their patronage. These orders are highly appreciated. Soliciting your orders, and once more thanking you for favors in the past, we remain,

Very truly yours,

Parcel Post on Seeds.

We pay parcel postage on all seeds quoted by the packet, ounce, quarter-pound, pound, pint, quart, gallon and peck where noted "Parcel Post Paid." We do not pay postage on any goods unless so stated. Our prices on pages two and three do not include parcel postage. Please bear this in mind when ordering.

Seeds By Express or Freight.

We do not pay carrying charges on any heavy seeds by the bushel or bag, nor on any tools, fertilizers, trees, poultry supplies, etc., excepting where stated "Parcel Post Paid."

Cash With Order.

Please send money with the order sufficient to cover the whole bill, and remit by express money order or registered letter. Checks covering payment of goods must include 10 cents for collecting them. You will avoid delay by remitting by express or postoffice money order. We decline sending goods "Collect On Delivery" unless remittances be made on account to guarantee acceptance.

The Prices We Quote

On Grass Seed, Grains and all Farm Seeds are those ruling January 1, 1915, and are subject to change. As far as possible we will fill in full all orders for seeds that are quoted subject to variation in price, but if market values will not permit this, we will send all that money remitted will pay for.

Non-Warranty.

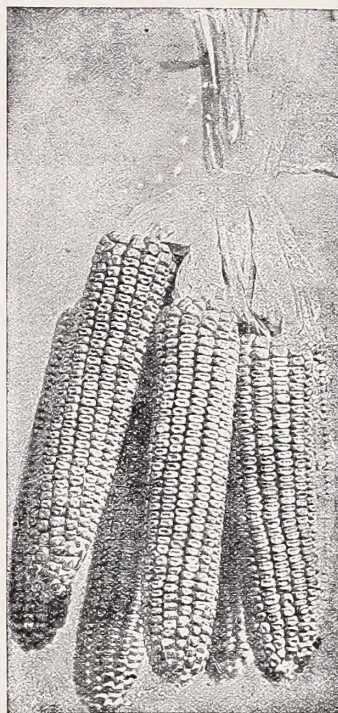

Most of the failures with seeds, plants and bulbs are due to causes entirely beyond our control, such as unfavorable weather or soil conditions, too deep or shallow planting, etc., which renders it impossible for us to guarantee success, and although we take all possible care to supply only such goods as will, under proper conditions, produce satisfactory results, we will give no warranty as to description, quality or productiveness of any of the seeds, plants or bulbs we send out, and will not be in any way responsible for the crop, and every order for articles named in this catalogue will be executed on these conditions only. If they are not accepted on these conditions they must be returned at once. It must, however, be plain to every one who gives the matter the slightest thought, that it is to our best interest to send out only such stock as will not only grow, but prove true to name and description.

Ratekin's Pride of Nishna Corn.

A grand, glorious deep grain yellow corn, maturing in 90 days, having large ears, small red cob, grains narrow and deep, stalks strong and robust with leafy broad blades, furnishes excellent fodder and a fine ensilage variety. Pride of Nishna never fails. Makes in dry or wet seasons on all soils. Don't fail to plant it. Price, qt., 35c; 4 qts., 75c; pk., \$1.25, parcel post paid. By freight, not prepaid, 4 qts., 50c; pk., 75c; bu., \$2.00.

Ratekin's Mammoth Yellow Dent Corn.

A superb large ear variety, maturing in about 100 days. On good soil will average 75 bushels to the acre. Ears a bright golden yellow, large grains. Sure to give the best satisfaction. Price, qt., 35c; 4 qts., 75c; pk., \$1.25, parcel post paid. By freight, not prepaid, 4 qts., 50c; pk., 75c; bu., \$2.00.

Ratekin's Diamond Joe Big White Corn.

Ratekin's Seed Corn.

Genuine stock from the originators, Ratekin's Seed Co., Shenandoah, Iowa, all selected, pure bred and of highest germination. These corns do well in the South, mature early before any summer drouth sets in, in fact, they are all practically 90 to 100-day corns, maturing if planted in April, by August 10.

Ratekin's Diamond Joe Big White.

The corn that made 146 bushels to the acre. Ears pure white, medium size, grains average depth and size, stalk strong and robust, bearing two good ears on an average, matures early, about 100 days, therefore well adapted for drouthy sections. Acknowledged by planters and corn growers everywhere as the "King of All White Corns."

Price, qt., 35c; 4 qts., 75c; pk., \$1.25, parcel post paid. By freight, not prepaid, 4 qts., 50c; pk., 75c; bu., \$2.25.

Ratekin's Iowa Silver Mine.

Especially well adapted for poor or thin land. The ears average eight inches and always fill to the ends, grains pure white, firm in texture but not flinty, therefore has proven a splendid variety for the South, eliminating the extra hard flinty features so objectionable with some varieties, yet it is firm

enough to keep from rotting, as most soft corns do in the South. Matures in 90 to 95 days, and is a big yielder. Price, qt., 30c; 4 qts., 70c; pk., \$1.15, parcel post paid. By freight, not prepaid, 4 qts., 45c; pk., 65c; bu., \$2.00.

Ratekin's Yellow Leaming Corn.

Ears medium in size, orange yellow, small grains, quick maturing, generally 90 days; having a medium cob it dries quickly. This is the genuine Leaming Corn, selected and grown right, and will give customers best results. If you want an early quick maturing corn, plant Leaming. Price, qt., 30c; 4 qts., 70c; pk., \$1.15, parcel post paid. By freight, not prepaid, 4 qts., 45c; pk., 70c; bu., \$2.00.

The stalks are as thick and broad as those of Rhubarb, being one and one-half inches broad, heavily ribbed and from ten to twelve inches long below the leaf. These stalks are delicious when cooked and served in the same manner as asparagus. The extra large leaves of thick texture are heavily crumpled or "savoyed;" crisply tender and of fine flavor. The leafy portion of the foliage is cooked and served in the same manner as spinach. The leaves and stalks served as separate vegetables afford two distinct dishes from the same plant at one time. Pkt., 5c; 1 oz., 15c; 2 oz., 25c; ¼ lb., 40c; 1 lb., \$1.00, parcel post paid.

Bonny Best Early Tomato—New. As its name signifies, it is the best extra early tomato yet introduced. Is fully ten days earlier than Chalk's Early Jewel, and within a day or two, if not quite as early as Spark's Earliana. Truckers who tested it claim it is as early as Earliana. It is a vigorous grower, very prolific, with dense foliage, which protects the fruits from hot sun when other varieties like the Earliana have scalded fruits. The fruit is even size, smooth, round, red, of delicious flavor, ripening to stem. Pkt., 10c; ½ oz., 20c; 1 oz., 35c; 2 oz., 60c; ¼ lb., \$1.00; 1 lb., \$3.00, parcel post paid.

Compared with Earliana it is five days earlier, a heavier cropper, fruits fully as large but thicker through from stem to blossom end, more solid and of a deeper red color. It ripens close up to the stem. In habit it resembles Earliana, being quite dwarf with little foliage, but is more compact. It is the greatest yielder we have ever seen. Pkt., 5c; ½ oz., 25c; 1 oz., 35c; 2 oz., 60c; ¼ lb., \$1.00; 1 lb., \$3.00, parcel post paid.

Flower Seeds

General Culture Directions.—Most Flower Seeds germinate well in a rather light, sandy loam, exposed to the sun, while a few are benefited by partial shade, and some do best with an element of clay finely mixed with the soil. Nearly all the hardy seeds germinate better when planted in early spring, as soon as the soil can be worked fairly easy.

We have made our list of Annuals and Perennials under separate headings.

Perennial Flower Seed

Hardy Perennials are easily grown from seed. In many cases they are a little slower than annuals, but with intelligent care they are successfully raised, and from seed is an excellent way to get up a big stock of Perennials in a short time. Many Perennials, if sown in spring, bloom the first year from seed as freely as annuals. Others wait a year; that is, if sown this year they don't bloom until next year.

The seeds may be sown in spring or in summer. In spring the sowings may be made in the window, the hot bed, the cold frame, the greenhouse or in the open ground out of doors.

A row of brush or wire netting should be placed between them for the vines to trail on. Pick flowers closely and do not allow to go to seed.

Nitrate of Soda is the best fertilizer for sweet peas. It is a fine stimulant and plant food. Apply lightly alongside of plants, not too close.

Grass, Clover and Farm Seeds

It is important that grass seeds be covered carefully with a light harrow not more than half an inch. Clovers and large seeds about an inch. Cotton Seed

We have listed only the most popular and new varieties, and all are stocks that have been grown for us on contract. Any one wanting other cottons not shown here, write us for prices on same, as we are always in position to obtain pure seed of most all kinds. Owing to conditions in foreign countries at this writing, and the probability of a curtailed demand, prices on cotton seed are very uncertain. If you will correspond with us when ready to buy, we shall be glad to quote you lowest market prices.

Quality of Our Cotton Seeds.—We buy our seed of originators, or from scientific growers of seed bought from originators, in car lots. We know our growers; we know what is genuine seed of each type. When you buy of farmers or miscellaneous shippers, you are not certain what you are getting.

Half and Half Cotton.

Half and Half Cotton—Our seed is grown from originator's stock, and is far superior to the ordinary seed which has not been isolated or kept pure. As every one knows, all cotton seed must be handled with the utmost care, both in the field and at the gin. Half and Half Cotton, when genuine, has proven one of the most wonderful short cottons developed, large bolls, as early as King's, and will turn out 44 to 50 per cent. lint, according to the soil and season. The bolls are large, five locked, stalks vigorous and hardy, and will stand drouth better than most varieties. The staple is rather short, but when taken into consideration the high percentage of lint of Half and Half, it will certainly pay to plant same. Price of pure seed: bu., \$2.50; 5 bu., \$11.00; 50 bu., \$100.00.

Trice's Early Big Boll Cotton—Trice's is the cotton for boll weevil sections on account of its light foliage and extreme earliness. The lint will run on good soil 1½ inches and turn out 30 per cent. at the gin. Large bolls, plant medium to tall, short limbs up to top, 2 to 3 large limbs at the bottom. Grows trim, straight up. No surplus foliage. Medium white seed. Opens early. Storm-proof, but easily picked. By freight, bu., \$1.50; 10 bu., \$14.00; per ton \$70.00.

Early Triumph Big Boll Cotton—It is the earliest of all big boll varieties, being only a week later than King's Early. As a storm-proof cotton it beats all other cotton. A hand can pick more of it in a day than any other variety. It makes from 36 to 41 per cent of lint (thirty-six to forty-one pounds of lint to 100 pounds of seed cotton.) This cotton has a strong, thrifty, deep-rooted, medium sized, well-shaped stalk; bolls are usually five lock, very large and solid, therefore making more cotton than other spongy large bolls. Lint of the Triumph Cotton is silky and stronger than that of any other variety. 1 1-16 to 1½ inches in length. Bu., \$1.50; 10 bu., \$14.00; ton, \$75.00.

Columbia Early Big Boll Staple Cotton—An improved big boll staple variety. Plants tall and branching; length of staple, which is strong in texture, is 1½ inches; large locks and will gin out 35 per cent. Will yield easily a bale to the acre, and matures medium early, therefore well adapted to all boll weevil sections. Bu., \$1.50; 10 bu., \$13.50; ton, \$75.00.

Norcross Garden Cultivator.

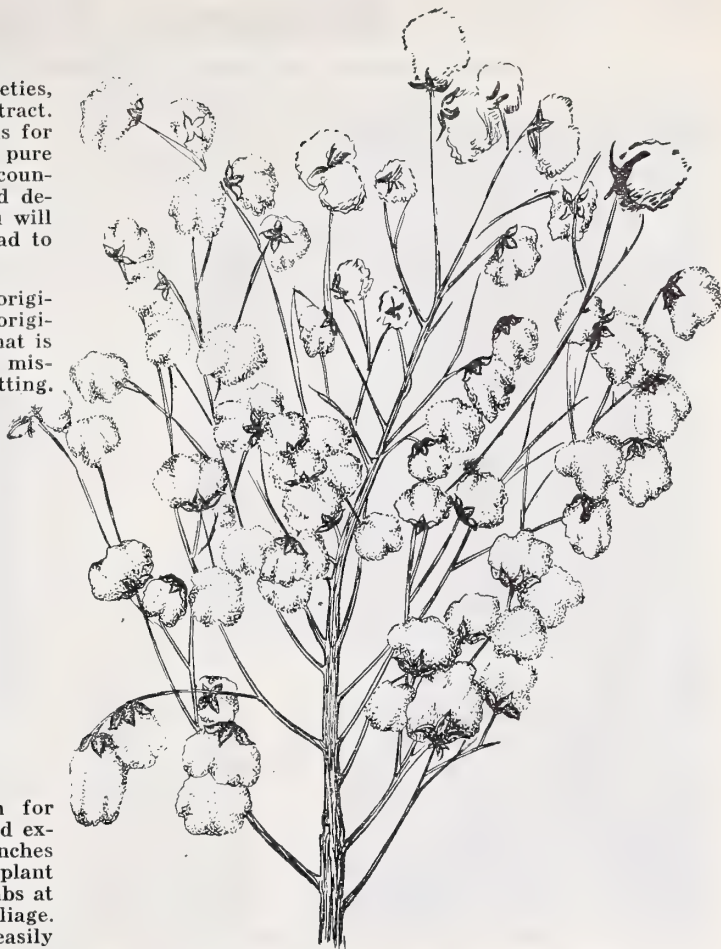

Best cheap tool made. You cannot afford to do without one. A small boy can operate it with ease. Tines can be adjusted or removed by simply turning a nut; a fine tool for all garden work.

Half and Half Cotton.

Christopher's Improved Early Big Boll Cotton—Bolls are very large, 40 of them making 1 pound seed cotton, 5 to 7 locks to the cluster; seed cotton about 40 per cent lint, easily picked. It produces more to the acre than any other cotton known; staple very strong and about 1 1-16 inches; matures very early; stalks very large and branching, therefore should have ample space in the rows. Bu., \$1.50; 10 bu., \$14.00; ton, \$75.00.

King's Improved—A very prolific variety; extra early and can be planted as late as June 15; will mature good crop. Pk., 50c; bu., \$1.40; 10 bu., \$12.50; ton, \$75.00.

Cleveland Big Boll—Very early, big boll, staple 1½ to 1¾ inches. Succeeds well on most all kinds of land. Bu., \$1.50; 5 bu., \$7.00; 10 bu., \$13.50.

Florodora Long Staple—A splendid staple variety, maturing very early, in fact, it is the earliest of all the long lint cottons, which always brings good premium. Well suited to rich upland soil. Bu., \$1.50; 10 bu., \$14.00.

Mississippi Silk Staple—This is one of the finest staple cottons grown; succeeds either on good uplands or rich soil. Plant medium, vigorous, sugar loaf in form; bolls medium, 4 to 5 locked, opening well; seeds medium to small, covered with white fuzz; lint fine, strong, length 1½ inches. By freight, bu., \$2.00; 10 bu., \$16.00; ton, \$90.00.

Express Cotton—A new and very desirable early maturing cotton, especially adapted for boll weevil sections, as it makes extremely early, and at the same time a splendid drouth resister. Some very large planters in the Delta are using Express Cotton almost exclusively now on this account. The yield is magnificent, plants fruiting extremely heavy, producing lint 1 1-16 inches and easily picked. We look for a great future for Express Cotton. Price, bu., \$2.50; 5 bu., \$12.00; 10 bu., \$22.00.

Webber Cotton—Large boll, long staple. Was originated by D. R. Coker. A low growing heavy fruiting variety, making lint 1¼ to 1½ inches in length. We have pure seed of Webber, raised for us from original stock. Bu., \$2.00; 5 bu., \$8.00; 10 bu., \$15.00.

Selected Field Corn

Corn is One of the Most Important Crops with Southern Farmers.

Consequently, we are devoting considerable space to the description of the different varieties we have to offer, but are listing only those that we consider to be the very best of their type. Our stocks are the product of carefully selected seedstock and of crops that have received every care necessary to the production of a grade of corn that can be recommended as strictly seedstock.

Stephenson's Red Cob Gourd Seed—A very desirable deep grain pure white variety, ears about ten inches long with a very small red cob well filled to the end. Has sixteen rows of kernels to the ear; these measure $\frac{7}{8}$ of an inch in length, which are pure white. This splendid corn is the variety you have been looking for on account of its desirable qualities. Stalks medium tall but are very heavy, therefore almost storm proof, good size ears with a long narrow grain and a very small red cob, and will produce two to three ears to the stalk. Stephenson's Red Cob Gourd Seed Corn is as well adapted to bottom lands, and does equally well on rich uplands, the grain having enough flint in it to avoid rotting. Qt., 40c; 4 qts., \$1.00; pk., \$1.75, parcel post paid. By freight, not prepaid, 4 qts., 75c; pk., \$1.25; bu., \$4.50.

Shaw's Mammoth Red Cob White Dent—One of the best all-round white sorts, producing largest crops of finest quality corn. The ears average about 10 inches in length, of uniform size, and good depth of grain; on red cobs, well filled. The grains are pure white, solid, producing the finest milling white corn. The yield of this superior corn is very large, sometimes as much as 80 bushels per acre. Qt., 40c; 4 qts., 85c; pk., \$1.50, parcel post paid. By freight, not prepaid, 4 qts., 60c; pk., \$1.00; bu., \$3.00.

Blount's Prolific—This remarkably prolific corn was introduced by Prof. Blount, who, starting with two ears to the stalk, has succeeded in improving it so as to produce from three to six ears. It is a large-yielding white variety of flinty nature, making excellent meal. Reports of this corn from Texas and Alabama Experiment Stations rank this as one of the largest yielding of field varieties for the South. For late planting the corn has no superior. It is of quick growth, matures up well and yields splendidly. Qt., 40c; 4 qts., 85c; pk., \$1.50, parcel post paid. By freight, not prepaid, 4 qts., 60c; pk., \$1.00; bu., \$3.00.

Mosby's Prolific—This is a Southern corn, and is recommended for general crop. It is purely white, small cob, deep full grain, neither too hard nor too soft, and stands crowding in the drill as close again as any other kind. Ears of medium size, but long. It stands drouth better than ordinary corn. Qt., 35c; 4 qts., 75c; pk., \$1.25, parcel post paid. By freight, not prepaid, 4 qts., 50c; pk., 75c; bu., \$2.50.

Tennessee Red Cob White—A large-eared, red cob corn; grain deep and large; a fine Southern grown variety. By parcel post, qt., 35c; 4 qts., 75c; pk., \$1.20. By freight, not prepaid, 4 qts., 50c; pk., 70c; bu., \$2.50.

North Carolina White Prolific—A fine variety of white field corn. It is very hardy and can be planted very early, as well as late. By parcel post, qt., 35c; 4 qts., 75c; pk., \$1.50. By freight, not prepaid, 4 qts., 50c; pk., \$1.00; bu., \$3.00.

Vardaman's Stooling Corn—Has taken first prize at all Southern State fairs and was again the winner at the 1914 Tri-State Fair last September. Vardaman's Stooling Corn is a cross of Mosby's and North Carolina Prolific, and resembles the former variety; a pure white corn with good size ears that will produce from two to ten ears on every hill, depending on the land. The average yield of this splendid corn for the last three years was 94 bushels per acre. Read the last three-year yields as reported by Mr. Vardaman:

1912 crop of 70 acres produced 8,505 bushels, an average of 121½ bushels per acre. 1913 crop of 100 acres produced 9,432 bushels, an average of 94 1-3 bushels per acre, notwithstanding a ten-weeks' drouth.

1914 crop of 150 acres, with drouth from May 4th to August 2nd, or about 91 days, made an average yield of 75 bushels to the acre.

The suckers on this corn produce corn for three or four weeks later than the main stalks, which in case of drouth, extends the fruiting season three weeks longer than any other corn. Plant in rows 3 feet each way and 18 inches apart in the row, leaving two stalks to each hill. We have stock direct from Mr. W. S. Vardaman, the originator, price as follows: Qt., 50c; 4 qts., \$1.00; pk., \$1.75, parcel post paid. By freight, not prepaid, 4 qts., 75c; pk., \$1.25; bu., \$4.50.

Schwill's Early Surprise—A good, early white field corn. Planted about the middle of March, it will mature about the 1st of July. Early Surprise is the variety to plant if you want to be sure of a crop maturing before the drouth comes in August. Ears of good average size. Qt., 35c; 4 qts., 75c; pk., \$1.25, parcel post paid. By freight, not prepaid, 4 qts., 50c; pk., 75c; bu., \$2.50.

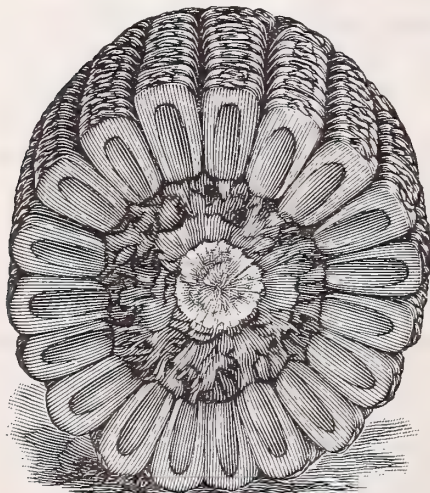

Schwill's Prize Medal—Very long, broad, deep white grains, with immense ears. On good land will make 60 to 75 bushels to the acre. A Southern variety; a vigorous rank grower, and on account of the size of ears and grain will win prize anywhere. Qt., 40c; 4 qts., \$1.00; pk., \$1.75, parcel post paid. By freight, not prepaid, 4 qts., 75c; pk., \$1.25; bu., \$4.00.

Hickory King—100 days. The cob is so small and the grain is so large that when an ear is broken in half one grain will cover the entire end of cob. Nearly all of the stalks bear two ears, and we consider it one of the best white corns grown. Does well on thin land. It ripens in from 100 to 110 days from time of planting. Qt., 40c; 4 qts., 75c; pk., \$1.50, parcel post paid. By freight, not prepaid, 4 qts., 50c; pk., \$1.00; bu., \$3.00.

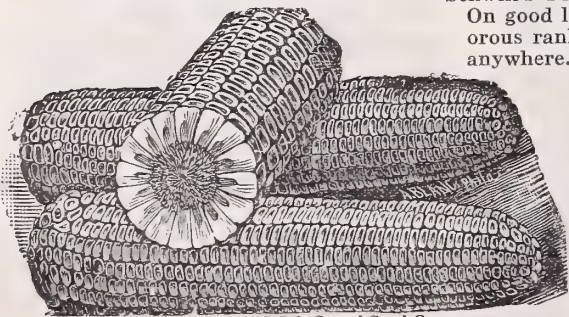

Dempsey's Prolific—Similar to Batt's, but considerably larger; pure white ears, always sound and produces two to four ears on a stalk. Qt., 50c; 4 qts., \$1.00; pk., \$1.75, parcel post paid. By freight, not prepaid, 4 qts., 75c; pk., \$1.25; bu., \$4.00.

Vardaman's Stooling Corn.

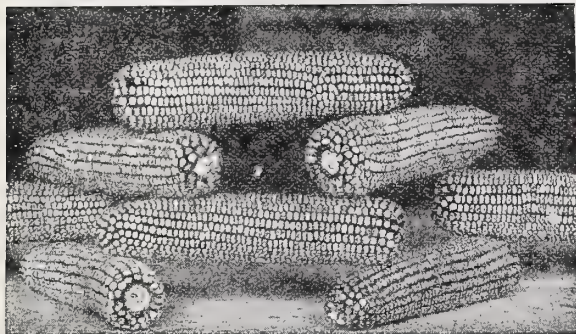

Shaw's Mammoth Red Cob Corn.

Stephenson's Red Cob Gourd Seed Corn.

Tait's White Dent—A pure white early corn, bearing two good ears to the stalk, maturing in 90 to 100 days. The cobs are unusually small for the size of the corn. By freight, not prepaid, 4 qts., 50c; pk., \$1.00; bu., \$3.00.

It is a strong, robust grower, sending the roots deep into the soil. Stands heat and drouth well. Ears large, small grain and well covered with shucks. Should be planted in succession from middle of April to end of July. Qt., 50c; 4 qts., 90c; pk., \$1.50, parcel post paid. By freight, not prepaid, 4 qts., 75c; pk., \$1.00; bu., \$3.00.

Seay's Mexomer June Corn.

Seay's Mexomer June—The corn of quality and quantity. Superior to the ordinary type of Mexican June Corn. Seay's Mexomer Corn is universally adapted to all soils and climatic conditions. The grain is a beautiful snowflake white, with grains soft and of fine texture; grows successfully with only half normal rainfall. The heavy root system makes it resistant to hot, dry weather. It is very prolific, bearing 2 to 3 ears to the stalk. Can be planted early as well as late. Will mature in 80 to 90 days. Qt., 60c; 4 qts., \$1.15; pk., \$2.00, parcel post paid. By freight, not prepaid, 4 qts., 90c; pk., \$1.50; bu., \$4.50.

Tait's White Dent Corn.

SEASONABLE PLANTING.

This is one of the elements of success. Some vegetable and flower seeds such as English peas, turnips, potatoes, sweet peas, poppies, etc., also clover, oats, vetch, grasses should be sown early as they require cool, moist soil for root growth, while beans, vine seed, tomatoes, cow peas, soy beans, sorghum, millet, etc., should not be sown until the ground is warm. Too early planting of these plants of tropical origin is the most frequent cause of failure with them, the seedlings being so stunted by a chilly soil that the plants never become vigorous and are often overcome by weeds.

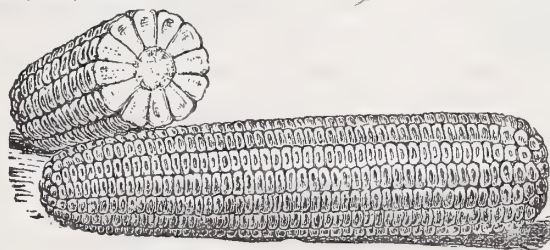

Red Cob White Ensilage—Heavy tall stalks, for ensilage; the very best sort. Qt., 40c; 4 qts., 85c; pk., \$1.50, parcel post paid. By freight, not prepaid, 4 qts., 60c; pk., \$1.00; bu., \$3.00.

Tennessee Mammoth Yellow—Ears are of a perfect shape, long and filled out to the end of the cob. The grains are not of a flinty type, neither are they so soft. A Southern grown large-eared yellow corn, sure to give satisfaction. Qt., 40c; 4 qts., 75c; pk., \$1.25, parcel post paid. By freight, not prepaid, 4 qts., 50c; pk., 75c; bu., \$2.50.

Schwill's Golden Warrior Corn.

Schwill's Golden Warrior—A comparatively new variety which has given most satisfactory crop results wherever planted. It was originated by an expert corn grower in the State of Tennessee, and carefully bred until its characteristics have been well fixed. It is early in maturity, and makes a good, stout stalk, ordinarily about nine feet high, well foddered, and producing one to two large ears to the stalk. The grains are deep and of a most attractive yellow color; the cob comparatively small. Qt., 50c; 4 qts., \$1.00; pk., \$1.75, parcel post paid. By freight, not prepaid, 4 qts., 75c; pk., \$1.25; bu., \$4.50.

High Grade Fertilizers

Best Results from the Soil.—If you want to obtain the best results from the soil, we are compelled, by sheer necessity, to use commercial fertilizers. The prices given below are net cash and f. o. b. Memphis. Special prices on car lots and larger quantities delivered at your depot will be given on application.

Directions for Using Fertilizers.

For Corn—When sown broadcast, use 200 to 400 pounds to the acre. If applied in the hill, use 1 handful to 2 or 3 hills, mixing it with the soil or scattering it somewhat. Do not let seed come in contact with fertilizer.

For Cotton—Open up a furrow, put down 200 to 300 pounds, then cover, then plant seed. Or you can apply after thinning the plant to a stand, using any good fertilizer distributor, drilling the fertilizer about 6 to 8 inches from the plants.

For Potatoes—Apply 400 to 600 pounds per acre of Truck Grower in the rows or hills.

For Grass—Apply at any time during the spring or fall, 300 pounds per acre, broadcast.

For Beans, Peas and Garden Vegetables—Apply 300 to 400 pounds per acre, broadcast, and rake or harrow it before planting the seed.

For Tomatoes—The usual plan is to furnish each plant with a small handful at transplanting time well mixed with the soil.

Ground Limestone for Soil Betterment.

When commercial fertilizers were first introduced, many farmers thoughtlessly abandoned lime sowing, but the reaction has already begun, and the wise land owner whose soil has been under tillage for many years, understands the value of using both commercial fertilizer and lime. The importance of lime for nearly all soils is generally understood.

Lime seems to be a necessary mineral requisite in plant life. Scientists discover that where there is a scarcity of lime, the principal farm products fail to mature, and where there is no lime at all, the soil is barren. Careful tests disclose:

7 lbs. of lime per ton of Corn Fodder.

9 lbs. of lime per ton of Oats.

10 lbs. of lime per ton of Timothy Hay.

40 lbs. of lime per ton of Clover.

The fertilizing properties of lime seem to extend in the direction of overcoming acidity of soil; supplying mineral necessary for plant growth; actively assisting in the fixation of phosphorous, potash and nitrogen, rendering them more attainable and convertible; all of which means better and larger crops.

In sacks containing 100 lbs., at 75c per sack; per ton, \$8.00.

Farmogerm—"Makes Poor Soil Good Soil."

(High Bred Nitrogen-Gathering Bacteria.)

Lack of nitrogen in the soil is one of the most common reasons for poor farm crops. Unfortunately, also, nitrogen is one of the most costly fertilizing elements. The best mixed stable manure contains only one-half of 1 per cent. nitrogen and hence is very expensive.

It is with much pleasure, therefore, that we offer an article which supplies the necessary nitrogen at one-sixteenth of the cost of using stable manure. This is accomplished by simply moistening the seed of any leguminous crop (such as any kind of Clover, Beans or Peas) with a solution of **Farmogerm**. This article is highly endorsed by farmers and scientists wherever tried.

The use of **Farmogerm** High Bred Nitrogen Gathering Bacteria, on the seeds of Peas, Beans, Clovers, Alfalfa and all other legumes, means an earlier and bigger crop and a large amount of nitrates added to the soil to benefit future crops of other kinds.

Farmogerm is prepared for the following crops. State for what crop you want it for when ordering, viz:

Red Clover, Crimson Clover, Alsike Clover, Alfalfa Clover, Burr Clover, Lespedeza, Vetch, Soy Beans, Cow Peas, Garden Beans and Peas, Sweet Peas.

Garden Size Bottle Each, \$.50; by parcel post, \$.55

Fall or Everbearing Strawberries.

A new species different from the ordinary strawberry, in that they bear in the fall. Many persons have the impression that the fall—or everbearing strawberries are difficult to grow successfully. This is an error; their culture is almost as simple as the ordinary kinds. For full crops in autumn, it is best to remove all blossoms until about the first or middle of July. In all other respects they should be given the same treatment as other varieties of strawberries. Prairie State Incubators and Brooders.

The Prairie State Incubators and Brooders have been on the market 30 years. These machines have been constantly improved, until today they will hatch a greater number of livable chicks than any other. By "livable" chicks we mean chicks that will live and grow to maturity. No matter how many chicks you hatch, if they don't live, it is a dead loss. The Prairie State Incubators copy Nature. Did you ever notice the hen that steals her nest on the ground? That is natural incubation. And she usually hatches every egg, doesn't she? A wet sand tray, covering the entire bottom of the machine in close proximity to the eggs, furnishes the proper amount of moisture and reduces the evaporation from the eggs to the same per cent (9 to 11 per cent) as under a hen. This insures chicks of full vitality—chicks that will live—just like the hen-hatched chicks. Complete Prairie State Catalogue free on request.

The International Sanitary Hover.

This hover can be picked up and carried around with ease and used anywhere. It gives equally good results in a hen house, barn, cow stall, piano or dry goods box. It is circular in shape; is made of metal throughout, and fireproof. The hover sets on floor just as a mother hen does. The lamp can be lifted out through the top and the operator does not need to kneel in the dust. There is no possibility of gases and fumes from the lamp getting into the air breathed by the chicks. The thermometer can be lifted out, looked at and dropped back without moving the hover (see illustration). Can also be used as an oat prouter. It will do the work quickly and satisfactorily. Ask for circulars. Price, all complete, each, \$8.50.

Standard Lo Glo No. 1 Electric Incubator.

The Standard Lo Glo Electric Incubator.

The method that eliminates chance and insures bigger hatches of healthiest chicks. The secret of the Lo Glo Electric Incubator is in the perfect control of the temperature, ventilation and moisture; elimination of labor and economy of time. These Incubators are automatic in operation—the very instant the temperature rises a quarter of a degree above the point at which you have set the thermometer the circuit is broken automatically and the current is shut off from the lights controlled by the circuit-breaker; and when the temperature falls below the point at which the machine was set the light softly glows again, thus with scientific precision the temperature is kept under absolute control. Grit Boxes, Hoppers, Etc.

The National Dry Food Hopper.

Impossible to clog is a strong feature in favor of this hopper. How often do you find your feed clogged? This hopper eliminates all that trouble. Another most important feature which is overlooked by most poultrymen is to allow rats or mice to contaminate the food. Fowls do not relish feed that mice have been running over. With this hopper just turn the button and the feed is closed, away from everything until opened in the morning, or any part of the day desired. Mash, grain, beef scrap, etc., is all fed to this hopper with absolutely no waste. Price, small size, No. 1 Hopper, each, 60c; medium size, No. 2 Hopper, each, 75c. By parcel post, No. 1 Hopper, 85c; No. 2 Hopper, \$1.00.

Seeds by Parcel Post

Your Postmaster will tell you the parcel post zone in which your postoffice is located, measuring from Memphis.

When ordering write your name plainly, give correct P. O. address if by mail, if by express give your express office or nearest express, to avoid any delay. Where no instructions are given as to how shipment should be made, we will use our own discretion, but we urge all customers to state plainly whether they want goods mailed, expressed, or shipped by boat or by rail.

All C. O. D. orders must be accompanied by at least half the amount.

All Seeds and Plants shipped by mail takes parcel post rates. Packages up to eight ounces in weight are carried at the rate of one cent for every two ounces, regardless of distance. Packages over eight ounces are charged by the pound. The rate per pound varies according to the distance, which is measured by the Government Zone System, each zone covering a certain number of miles from point of shipment. Distance and rates are shown in the table below. Packages carried by the Parcel Post are handled like any other mail matter. They are delivered to your box by your rural mail carrier if you live on a rural route, or delivered to your door if you live in a city where there is carrier service, or delivered to your local postoffice if you live where there is no carrier service.

In most instances, Parcel Post Shipments are more desirable even if the cost is slightly higher than express shipments, because the package is usually delivered to your box, whereas it is sometimes necessary to drive several miles to the town to get an express package.

Insured Parcel Post.

All articles shipped by parcel post are at the customer's risk, unless the package is insured. Packages may be insured against loss for the value but not to exceed \$25.00 on payment of a fee of 5 cents for each package in addition to the regular parcel post rates. Packages in excess of \$25.00 but not to exceed \$50.00, may be insured on payment of a fee of 10 cents for each package in addition to the regular parcel post rates.

If you wish your package insured, include the insurance fee in addition to postage and amount you send for goods.

Where possible, we have quoted parcel post paid prices on many articles, and most all seeds in this catalogue. If you desire any larger quantities sent by parcel post than those we have priced parcel post paid, you can easily calculate postage charges from above table and add 20 cents to that amount for packing, as we must use good strong bags when sending any seed by parcel post.

Ideal Plant Protector.

Protects plants from frost and cold. Most exhaustive tests have proven that the "Ideal Plant Protector" will protect a plant against injury from frost, from rain, from hail and from wind. The protector being made of dry, water and frost-proof cardboard, which protects the plant from rain or hail, and the wire foot being pressed into the ground, on the wind side, and the Cover Close to the Ground, so that the wind cannot get under, and the covers being cone-shape, the wind only presses it closer to the ground. The "Ideal Protector" is made of a heavy cardboard, thoroughly water and rain-proof. The rain does not hurt them. The hail does not hurt them. They are simple, durable and easy to handle. The gardener who uses Ideal Plant Protectors can safely sow seed two weeks earlier than usual, as they protect all tender plants, such as Tomato, Pepper, Cucumber, Egg Plant, Squash, etc., from frost. Made in two sizes—No. 10, 10 inches high and 10 inches in diameter, and No. 12, 12 inches high and 12 inches in diameter. Price, No. 10, 25c per doz.; \$2.00 per 100; \$15.00 per 1000. Price, No. 12, 30c per doz.; \$2.25 per 100; \$18.00 per 1000. By parcel post, No. 10, 40c per doz.; \$2.60 per 100. No. 12, 45c per doz.; \$2.85 per 100.

Special Notice Parcel Post Prices.

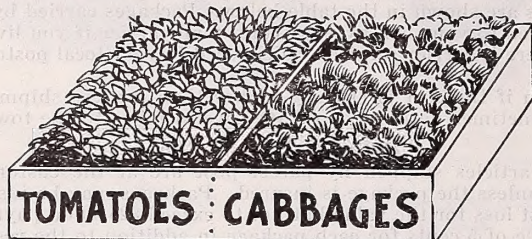

The prices we have made in this catalogue by parcel post are all charges paid in limit of local, first, second and third zones. If you live beyond the third zone, then please add additional funds for extra postage. Also if you wish parcels insured, add 5c for insurance fee in addition to postage and amount you send for goods, as all parcel post packages we forward are at customer's risk, unless the package is insured.

Vegetable Plants

All orders for vegetable plants will be filled in season when plants are in right condition, and at the right time. See dates below when different varieties are ready for shipment.

We can supply in any quantity, in their proper season, all vegetable plants, here mentioned, and ship directly from beds, well packed, on the shortest notice. NOTICE—If we should for any reason be out of any variety ordered, we will send some other similar variety in place of it, unless requested to the contrary.

At prices quoted, they are sent by express at purchaser's expense, excepting where noted by mail. As plants are perishable, we advise all large lots to be forwarded by express. They must be sent separately from any greenhouse plants, roses, etc. We do not send vegetable plants with greenhouse plants.

Frost-Proof Cabbage Plants.

Ready January 15th.

These are hardy outdoor-grown plants that will stand any kind of weather. The seed is planted in October and November, in a section in the South especially suited for this purpose. We are growing several million of plants this year, and will be able to supply all orders. By recent experiments, we have located a desirable climatic condition near the Gulf, and the plants will be satisfactory in every way.

The use of open air, practically frost-proof, cabbage plants often enables the truck gardener to put full grown heads of cabbage on the market two to three weeks ahead of the ordinary home-grown plants, and of course he gets the top prices for his crop.

The Frost-Proof Plants may not look a bright, green color, like the tender hotbed seedlings, as naturally their outdoor winter growth, standing through frosts, light freezes, discolors them and gives them a stunted appearance. Set them out, and their excellent growth, as soon as the weather warms up will make you forget how they looked.

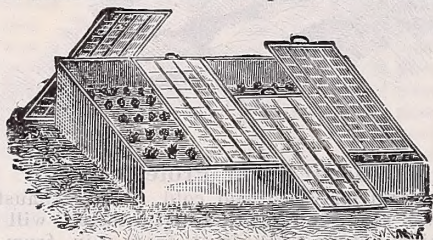

These plants are from the very best grown seed, and will be sent both from Memphis and from our grower at purchaser's option at prices below.

Will have the following varieties: Early Jersey Wakefield, Charleston or Large Wakefield and Succession.

Prices, f.o.b. Memphis, 100 for 25c; 500 for \$1.25; 1000 for \$2.00. Prices, f.o.b. Growing Station, 500 for \$1.00; 1000 for \$1.50; 5,000 for \$6.25; 10,000 for \$10.00.

A new variety from the South, which is superior to the now well known Nancy Hall, being earlier and more productive, while fully equal in quality. The outside skin is a deep golden yellow, flesh darker yellow and superb in quality. The tubers are not quite as long as the Nancy Hall, however, they are smooth and regular. The vines run, making it a very productive variety. We were fortunate in growing a lot of nice seed the past season, and will have plants or draws ready May 15th. Price, per 100, 50c; 500 for \$2.25; 1000 for \$4.00. By parcel post, per 100, 75c; 500 for \$2.75.

Texas Sword or Stock Bean.

This new stock bean makes a rank but upright growth, the plant resembling a cotton stalk when in full leaf. Stands drouth to a remarkable degree. Cattle and hogs eat the leaves and stems and beans, especially so after frost hits the plant, affording splendid pasture for all stock. The stubble then turned under adds much fertilizer to the soil, in this respect very similar to the Soy and Velvet Beans. As the roots are thickly covered with nodules, the plant producing more roots than either Soy or Velvet beans, therefore more valuable for fertilizing purposes. Plant from April to June in 3-foot rows, eighteen inches apart, one bean to the hill, as they never fail to come to a good stand. Requires $\frac{1}{2}$ bushel to the acre. Do not fail to plant a few acres in this splendid new forage plant. Price, 1 qt., 50c; 4 qts., \$1.70; pk., \$1.85, parcel post paid. By express, at buyer's expense, 1 qt., 40c; 4 qts., 90c; pk., \$1.50; bu., 60 lbs., \$5.50.

The Early Bird Velvet Bean.

The most valuable of all Velvet Beans, on account of the extreme earliness. Vines and beans worth double Cow Peas. They can be planted after oats in May and will mature in time for fall grain planting, a quick September grazer or for turning under for soil manuring. This new variety is ten days earlier than the Yokahomas, having been planted April 20th and crop matured September 20th. Decidedly the most prolific and earliest variety of Velvet Beans yet introduced. Plant in rows 3 feet apart, dropping two beans every twelve inches. Requires 1 peck to the acre. They can be planted in the corn for pasturage and fertilizer. Supply of seed limited, so order early. Price, 1 qt., 50c; 4 qts., \$1.60; pk., \$2.85, parcel post paid. By freight, at buyer's expense, 1 qt., 40c; 4 qts., \$1.40; pk., \$2.50; bu., 60 lbs., \$8.50.

Sudan Grass.

The emancipator of the South, which will solve the hay problem. A new forage crop of immense value to our Southern States, yielding from two to four tons of good hay to the acre, which is greatly relished by all stock. The plant grows six to eight feet high, therefore easy to harvest. Makes two and three cuttings in a season, resists drouth, therefore yields in dry sections where other grasses are a failure. Plant in rows in April, 2 to 3 pounds to the acre. Also sown broadcast 16 pounds to the acre. Ask for circulars giving further information on Sudan Grass. Price, 1 lb., \$1.00; 10 lb., \$7.75, parcel post paid. By freight, not prepaid, 1 lb., 90c; 10 lb., \$7.50.

Clipper Seed Cleaner.

This is an up-draft fanning-mill and does the best work in cleaning all kinds of seed and grain; more of these are used by seed dealers than all other makes combined, and farmers would save the price of a mill in many cases by cleaning and grading up their grain before selling. A Clipper will pay for itself in one year by the increase in yield resulting from carefully cleaned seed grain. Price, only \$25.00, or if sent direct from the factory in Michigan, only \$22.00.
